

CLUTCHR PROFILE 2.0 SPEC

Athlete Journal + Mental Game Score

Version: Launch v1.0

Purpose: Rebuild Profile into a premium athlete journal using real activity data only.

1. Product Decision

Profile is not a stats dashboard.

Profile is the athlete's personal baseball operating log.

It should answer six questions:

Who am I?
What have I done?
What cue am I carrying?
Am I showing up?
Where am I trending?
What should I do next?

If a Profile metric cannot be explained from real app behavior, it does not ship.

2. Profile 2.0 North Star

A player should open Profile and feel:

I have an identity.
I have proof of work.
I know what I'm carrying.
I can see whether I'm showing up.
I know where I'm training most.

The Profile should feel like Robinhood meets a baseball journal:

- one clear trend
- real progress

- earned stats
- minimal noise
- no fake psychology metrics
- no cluttered scouting report

3. What Gets Removed

Remove these before launch:

Current Profile Element	Decision	Why
Radar / hexagon chart	Remove	Looks fake unless backed by real scoring
Mental Edge rings	Remove	Confidence/focus/composure/recover scores are not real enough yet
Strengths Developing tag cloud	Remove	Feels hallucinated unless every tag is earned from real completions
8-phase Career Path list	Remove	Too bulky and duplicates Career
Long Coach's Eye paragraph if hardcoded	Remove or replace	Cannot imply real coaching insight if data is fake
Any "coachability" claim	Remove unless earned	Too interpretive
Any confidence/focus score	Remove unless user self-rates it	Avoid fake psychological measurement
Big text-heavy cards	Cut down	Profile must be readable fast

4. What Stays

Keep only real, useful identity/progress elements.

Element	Keep?	Data Source
Athlete name	Yes	profile/auth/local state
Avatar / Cap image	Yes	existing asset or profile fallback
Role	Yes	onboarding/profile
Level/season	Yes if real	onboarding/profile
Rank/badge	Yes	XP/rank system

Element	Keep?	Data Source
XP total	Yes	real XP
XP to next rank	Yes	rank thresholds
Lessons/reps completed	Yes	completed lessons/reps count
Current streak	Yes	streak system
Best streak	Yes	streak history if available
Playbook link	Yes	existing route
Current cue	Yes if exists	saved cue/playbook
Upgrade to Pro	Yes	paywall route
Edit Profile	Yes	settings/profile edit
Streak reminders	Yes if functional	notification setting or placeholder
Sign Out	Yes	auth
Mental Game Score	Yes	local activity-derived score
Training breakdown	Yes if data-backed	completions by world/evolution/skill

5. Profile 2.0 Layout

Section 1 — Header

Purpose

Establish identity fast.

UI

CLUTCHR logo / Profile label
Your Player OS
Role, routines, progress.

Notes

Keep the top clean. No giant paragraph.

Section 2 — Athlete Identity Card

Card content

[Avatar]
Cap
PITCHER
High School · In Season

[Rank Badge]
Built

Required fields

Field	Source	Fallback
Name	profile display name	"Player"
Role	athlete role	"Ballplayer"
Level	onboarding/profile	hide if missing
Season phase	onboarding/profile	hide if missing
Rank badge	XP/rank	"Built" or lowest rank

Design

- dark premium card
- avatar left
- identity center
- badge right
- no small explanatory paragraph
- no fake performance claim

Section 3 — Mental Game Score Hero

Purpose

This becomes the emotional core of Profile.

It answers:

Did I get better at the mental game today?

Important disclaimer

Mental Game Score is not a psychological diagnosis.

It is not a confidence score.

It is not a mental health measurement.

It is a simple activity trend based on completed Clutchr work.

UI

MENTAL GAME SCORE

74.8 +2.1 today
[14-day sparkline]

Up because you completed 2 reps and saved 1 cue.

States

Positive day

+2.1 today
You stacked work today.

Flat day

0.0 today
No change yet. One rep moves it.

Down day

-1.2 today
No rep logged today. Start small.

New user / no history

Start your chart today.
Complete one rep to set your baseline.

Copy rules

Use:

- "Mental Game Score"
- "Today"
- "14-day trend"
- "One rep moves it"
- "Proof of work"

Avoid:

- "confidence score"
 - "focus score"
 - "mental health"
 - "mood"
 - "anxiety"
 - "psychological rating"
-

6. Mental Game Score Formula

Core rules

- Score range: **0–100**
- New user baseline: **60**
- Score is based only on real app actions.
- One active day should move the score.
- One missed day should dip slightly.
- Score should feel like a trend, not a punishment.
- Do not backfill fake history.

Daily inputs

Input	Meaning
reps_completed_today	completed lesson/rep count today
cues_saved_today	cues saved today
streak_active_today	whether streak is active
opened_app_today	optional, weak signal only
previous_score	yesterday's stored score

Suggested launch formula

```
const BASELINE_SCORE = 60;
const MIN_SCORE = 0;
const MAX_SCORE = 100;

function computeDailyMentalGameScore({
  previousScore,
  repsCompletedToday,
  cuesSavedToday,
  streakActiveToday,
}): {
  previousScore: number;
  repsCompletedToday: number;
  cuesSavedToday: number;
  streakActiveToday: boolean;
}) {
  let delta = 0;

  if (repsCompletedToday > 0) {
    delta += 2.0; // first rep matters most
    delta += Math.min(repsCompletedToday - 1, 3) * 0.5; // extra reps help,
    capped
  } else {
    delta -= 1.2; // slight dip for no work
  }

  if (cuesSavedToday > 0) {
    delta += 0.8; // cue ownership matters
  }

  if (streakActiveToday && repsCompletedToday > 0) {
    delta += 0.5; // consistency bonus
  }

  // Daily movement cap to prevent weird spikes
  delta = Math.max(-2.0, Math.min(delta, 4.0));

  const nextScore = Math.max(
    MIN_SCORE,
    Math.min(MAX_SCORE, previousScore + delta)
  );

  return {
    score: Number(nextScore.toFixed(1)),
    delta: Number(delta.toFixed(1)),
  }
}
```

```
};  
}
```

Why this formula works

- first rep matters most
- cue save matters, but does not overpower the rep
- streak helps, but does not fake performance
- missed days dip slightly, not harshly
- no big gamified spike
- no fake psychology scoring

7. Local Storage Model

Storage key

```
const MENTAL_GAME_SCORE_STORAGE_KEY = "clutchr_mental_game_score_v1";
```

Data shape

```
type MentalGameScoreDay = {  
  date: string; // YYYY-MM-DD  
  score: number;  
  delta: number;  
  reps_completed: number;  
  cues_saved: number;  
  streak_active: boolean;  
};  
  
type MentalGameScoreHistory = {  
  version: 1;  
  created_at: string;  
  updated_at: string;  
  baseline_score: number;  
  days: MentalGameScoreDay[];  
};
```

Local-only warning

For launch v1, this can be stored locally.

Add code comment:

```
// TODO: Move Mental Game Score calculation server-side once launch analytics  
model is finalized.
```

Important limitations

Local v1 means:

- score may not sync across devices
- deleting app may reset score
- reinstall may reset history
- server-side version should come later

That is acceptable for launch if the UI avoids overclaiming.

8. When to Update Mental Game Score

Best update triggers:

1. after `rep_completed`
2. after `cue_saved`
3. when Profile opens
4. once per app open if date changed

Avoid:

- updating every render
- creating duplicate daily entries
- recomputing multiple times from same action
- increasing score just because user opened app

Required idempotency rule

Only one entry per date.

If today's entry exists, update today's reps/cues and recompute from yesterday's score.

Do not keep adding score every time Profile opens.

9. 14-Day Sparkline Rules

If 14 days exist

Show all 14.

If fewer than 14 days exist

Show available days only and label:

Building your trend

If no days exist

Show placeholder line and CTA:

Complete one rep to start your trend.

Visual direction

- simple line
- green if today's delta is positive
- muted gray if flat
- red only for clear negative delta, used sparingly
- no axis labels
- no chart grid clutter
- no financial jargon like "market cap," "portfolio," or "shares"

10. Core Stats Row

Show three stat cards:

61

Reps

1d

Current Streak

4d
Best

Rename “Lessons” to “Reps” in user-facing Profile if the rest of the app uses rep language.

Data sources:

Stat	Source
Reps	completed lessons/reps
Current Streak	streak system
Best	best streak history

If best streak is not stored yet:

- show current streak as best if current is highest known
- or hide best until tracked

Do not invent best streak.

11. XP + Rank Card

UI

2,595 XP Next rank: Locked In
[progress bar]
1,595 / 2,000 XP in Built

Rules

- XP must come from real XP total
- rank label must come from rank thresholds
- progress bar must be mathematically correct
- do not show fake “elite performer” or fake projected rank

Optional copy

Earned through completed reps.

12. Current Cue Card

Purpose

Make Playbook feel personal.

UI

CARRY THIS

Breathe.

Saved from: Read the Dugout
Open Playbook →

Rules

Show if:

- user has at least one saved cue

Fallback if none:

No cue saved yet.
Complete a rep and carry one forward.

This is more important than fake charts

The saved cue is the bridge between lesson content and game-day usefulness.

13. Training Breakdown

Purpose

Show where the athlete has trained most.

UI

WHERE YOU'VE TRAINED

Foundation	38%
------------	-----

Game Mode	22%
Pressure	18%
Your Craft	15%
Locker	7%

Data source

Use real completed lessons grouped by:

1. evolution
2. world
3. role tag
4. skill tag

Use whatever data is most reliable in the current app.

If data is unavailable

Do not fake it.

Show nothing or a simple empty state:

Your training map appears after a few more reps.

Launch v1 version

Start with completed reps by Evolution or World.

Avoid “strength” claims unless mapped clearly.

Good:

Most trained: Foundation

Risky:

Your top strength is coachability.

14. Coach’s Eye Snapshot Rules

Coach’s Eye Snapshot can be valuable, but only if it is honest.

Allowed

Coach's Eye may summarize real activity:

Earned work: 61 completed reps · 2,595 XP · Built rank.
Most trained: Foundation and Reset routines.
Current cue: Breathe.
Recommended next rep: Bad-Call Reset in the Box.

Not allowed

Do not say:

Strengths: coachable adjustments
Growth: pre-pitch confidence
You are composed under pressure
Elite mindset
Mechanics improving
Confidence score rising

unless each claim is tied to real user input, completed content tags, or self-ratings.

Coach's Eye data rules

Claim Type	Allowed Source
completed work	completed lesson count
XP/rank	XP system
current cue	Playbook
most trained area	completion tags/worlds
recommended next rep	next-rep routing
current streak	streak system
best streak	streak system
self-rated confidence	only if user self-rated it
recovery/readiness	only if user entered readiness

Coach's Eye Launch v1 Card

COACH'S EYE

You've stacked 61 reps and 2,595 XP.
Most of your work is in Foundation.
Your current cue is Breathe.
Recommended next rep: Bad-Call Reset in the Box.

If data is thin

COACH'S EYE

Complete a few more reps and Clutchr will start showing your training pattern.

Do not use if hardcoded

If the card is hardcoded, cut it for launch.

15. Profile Settings Section

Bottom section:

My Playbook
Edit Profile
Streak Reminders
Upgrade to Pro
Sign Out

Rules

- My Playbook should feel premium, not buried
 - Upgrade to Pro should be visible but not obnoxious
 - Sign Out should remain clear and safe
 - Streak reminder toggle should only be active if reminders work
 - If reminders are not implemented, tapping shows coming soon or hides toggle
-

16. Profile 2.0 Screen Order

Recommended order:

1. Header
2. Athlete Identity Card
3. Mental Game Score
4. Core Stats Row
5. XP + Rank Progress
6. Current Cue / Playbook Carry Card
7. Training Breakdown
8. Coach's Eye Snapshot
9. Settings / Account Actions

If space feels heavy, combine:

- Core Stats + XP card
- Current Cue + Playbook link
- Coach's Eye + Recommended Next Rep

17. Empty States

No profile data

Build your Player OS.
Complete one rep to start your profile.

No cue saved

No cue carried yet.
Finish a rep and save one.

No Mental Game Score history

Start your trend today.
One rep sets the baseline.

No training breakdown

Your training map appears after a few more reps.

No Pro

Unlock the full Player OS.
Full paths, full Game Mode, full Playbook.

18. Data Safety and Trust

Do not call Mental Game Score:

- psychological score
- confidence score
- anxiety score
- mental health score
- wellbeing score

Do not imply diagnosis.

Do not imply verified athletic performance improvement.

It is an app-activity trend.

19. Profile 2.0 Acceptance Criteria

Profile 2.0 is launch-ready when:

- [] Profile loads without crash
- [] Athlete identity appears
- [] Role appears
- [] XP appears
- [] Rank appears
- [] Reps completed appears
- [] Current streak appears
- [] Best streak appears only if real
- [] Mental Game Score uses activity data
- [] Mental Game Score has no fake submetrics

- [] Current cue appears if saved
- [] Playbook link works
- [] Training breakdown appears only if real
- [] Coach's Eye uses real stats only
- [] Fake charts are removed
- [] Upgrade to Pro works
- [] Edit Profile works
- [] Sign Out works
- [] No hardcoded performance claims
- [] No therapy/mental-health language

20. Claude Code Implementation Prompt

Paste this into Claude Code after Sprint 2 bug fixes are stable.

You are working in the Clutchr Baseball repo.

TASK:

Rebuild Profile into Profile 2.0: a premium athlete journal using real data only.

PRODUCT RULES:

- Profile is not a fake analytics dashboard.
- Profile is the athlete journal.
- Use real app activity only.
- Remove fake/hardcoded metrics.
- Do not add new content.
- Do not change auth, payments, paywall routes, or sign-out behavior.
- Do not add new backend tables.
- Use local storage only for Mental Game Score v1.
- Leave TODO to move score calculation server-side later.

INSPECT FIRST:

- app/(tabs)/profile.tsx
- context/AthleteContext.tsx
- any XP/rank/streak helpers
- Playbook storage/routes
- any existing AsyncStorage usage
- any chart/sparkline component already in repo
- paywall/upgrade route
- sign-out logic

SHOW ME BEFORE BUILDING:

1. Current Profile data sources

2. Which metrics are real
3. Which metrics are hardcoded/fake
4. What you plan to remove
5. Proposed new layout

BUILD:

1. Header
2. Athlete identity card
3. Mental Game Score card
4. Core stats row: reps completed, current streak, best streak
5. XP + rank progress card
6. Current cue / Playbook carry card
7. Training breakdown only if data-backed
8. Coach's Eye Snapshot only if data-backed
9. Settings/actions: My Playbook, Edit Profile, Streak Reminders, Upgrade to Pro, Sign Out

MENTAL GAME SCORE:

- Score range 0-100
- New user baseline 60
- Local storage key: `clutchr_mental_game_score_v1`
- Use reps completed today, cues saved today, and streak active today
- No fake confidence/focus/composure scores
- No backfilled fake history
- Show 14-day sparkline or clean empty state
- TODO: move Mental Game Score calculation server-side after launch analytics model is finalized

REMOVE:

- radar/hexagon chart
- Mental Edge rings
- Strengths Developing tag cloud
- giant 8-phase Career list
- hallucinated Coach's Eye claims
- any hardcoded performance metric

ACCEPTANCE:

- Profile loads
- Sign Out still works
- Upgrade to Pro still works
- Edit Profile still works
- Real stats display
- Fake metrics gone
- Mental Game Score does not crash on first install
- No render loop
- No auth/payment regression

After building, report:

- files changed
- data sources used
- hardcoded metrics removed
- score formula
- storage key
- testing checklist

21. Final Profile 2.0 Principle

Profile should make the athlete think:

I'm building something.
I can see the work.
I know what I'm carrying.
I need to come back tomorrow.

That is the win.
